

As a natural raw material consisting, for example, of quartz sand, carbon, silicon and water, silicone is extremely kind to the skin and ensures a pleasant feeling of comfort. Plus, this water-repellent and temperature-resistant material doesn't pose any health risks. Why not give it a try? You won't be disappointed by ANITA's soft silicone compensatory cups and their impressive resemblance to the natural breast.

### Made in Germany and Austria

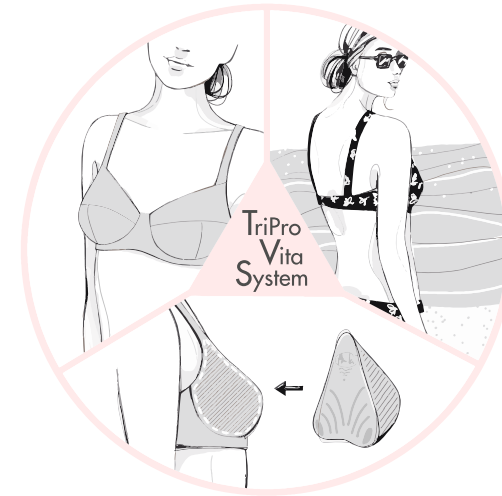

- Concealer effect to cover up any breast unevenness
- Option to individually adjust the volume
- Versatile use thanks to special forms
- Tapered edges allowing a smooth transition to the skin

Taking

RESPONSIBILITY

All ANITA breast prostheses are developed together with the women who wear them. They undergo rigorous testing and are manufactured by hand in our own factories in Upper Bavaria and East Tyrol. Each breast form is carefully checked and examined at the end of the manufacturing process.

### Anita cares.

Anita care breast forms are the perfect fit for Anita care special bras and swimwear. ANITA is the only manufacturer worldwide to produce almost its entire range of products in its own factories; it makes sure that all Anita care articles can be combined, besides carrying out extensive quality checks. You can therefore rest assured that our products provide you with the best possible solutions.

Further information on ANITA swimwear and swim breast forms can be found here: [www.anita.com/carebeach](http://www.anita.com/carebeach)

EMBRACE YOUR DIFFERENCES

Breast compensation  
from Anita care

CARE

### EMBRACE YOUR DIFFERENCES

Don't trust the image of perfection presented in the media – very few women actually have perfectly even breasts. Breast asymmetry is really common and comes in many forms.

#### Here are just a few possible causes of breast asymmetry:

- Genetic predisposition
- Hormones during puberty
- Pregnancy
- Inflammation of breast tissue when breastfeeding
- Breast surgery

If your breasts are uneven for whatever reason, they just make you all the more unique. But not all women are comfortable with the world seeing their breast asymmetry. Luckily, a range of clever little accessories is on hand to help out here – without the need for any surgery whatsoever. You can easily balance out small differences in volume by wearing Anita care silicone compensatory cups under tight clothing. ANITA's compensatory cups are made entirely from silicone and have a protective layer of silky-soft polyurethane film.

## Equitex VOLUME 1157X

Compensation for larger volume deficits and uneven tissue. Textile backing and the option to fill as required.

## Equitex 1057X

Textile backing and the option to fill as required as per the 1157X but with less volume compensation.

## Sequitex 1046X

Thin cup with a shiny film finish that can be worn in direct contact with the skin for an exceptionally smooth transition.

## Sequitex TRAPEZ 1045X

Small insert to compensate for partial unevenness – with a textile backing and the option to fill as required.

## Ultra-light and well-balanced

So I can feel secure

Breast asymmetry is a personal matter that every woman deals with in their own way. Not everyone is comfortable with the world seeing that their breasts are uneven. You can always head to your local medical store or similar to get some advice and find the perfect silicone insert for you. Alternatively, speak to your GP or gynaecologist, who may be able to prescribe these silicone cups. You will be surprised by the range of compensatory cups available. You can even buy special bras with hygienic breast form pockets to keep the cups securely in place.

NEW

## Velvety LITESHELL 1067X

Compensation for large volume deficits with ribbed structure for ventilation on the back and light silicone gel – for women who need a bit more of a boost.
